

Notes on Ethereum Classic (ETC)

Referred to: <https://cointelegraph.com/news/discovering-atlantis-ethereum-classic-hard-fork-and-what-will-change>

ETC Labs: launched ETH / ETC interoperability tool

ETC Labs collaborated with ChainSafe Systems and cooperated with ECC, Partiy and IOHK.

MET: cryptocurrency by ETC Labs and Metronome

Chainhopping (Bridge between ETH and ETC) <https://cryptrace.com/2019/06/28/ethereum-classic-devs-building-a-chainhopping-bridge-between-eth-and-etc/>

ETC hard fork estimated to be around September 17th noon on block heigh number 8,772,000

My observation:

This chainhopping technology is unique and is something to look into. I currently don't know for sure what it will be used for, maybe it will be a fast way to transfer tokens between ETH and ETC? Or is it beneficial to switch to whichever has the better hash rate or price?
